

Development of a live attenuated vaccine for chicken anaemia virus

Organisation: The University of Melbourne

Publication: 1 September 2001

Researchers: G.F. Browning, B.S. Crabb, P.C. Scott, H.K. Brown, M.A. Peters

Categories: Biosecurity & Flock Health

Tags: disease, virulent, strain, attenuated, chicken anaemia virus, exposure, mortality

The chicken anaemia virus is associated with increased mortality rates amongst chickens. This study makes considerable progress towards developing a defined attenuated vaccine against the virus.
