

# Effects of diet composition, gut microbial status and feed forms on cannibalism in layers

Organisation: University of New England

Publication: 1 July 2003

Researchers: S. Hartini, M. Choct, G. Hinch, J. Nolan

Categories: Biosecurity & Flock Health

Tags: dietary, layer hens, strains, vaccine, mortality, grain, beak trimming, cannibalism, fibre, Rispen's Marek's Disease

The project aimed to identify both nutritional and husbandry factors that may contribute to increase cannibalism, and to develop strategies to minimise it.
