

# Improving mycoplasma vaccines - targets for defined attenuation

**Organisation:** The University of Melbourne

**Publication:** 1 April 2006

**Researchers:** P.F. Markham, G.F. Browning, C-W. Tseng, A. Kanci

**Categories:** Biosecurity & Flock Health

**Tags:** protein, disease, strains, vaccine, bacterial, outbreak, parent, chickens, control, gene, mycoplasma

This project aims to improve the effectiveness of mycoplasma vaccines, and to use these findings to develop new vaccines capable of providing protection against variant strains that may not be controlled by the current generation of vaccines.
