

Rapid identification and pathotyping of virulent IBDV, NDV and AI isolates

Organisation: CSIRO Livestock Industries

Publication: 1 June 2006

Researchers: H. Heine and L. Trinidad

Categories: Biosecurity & Flock Health

Tags: virus, characterisation, pathogenic, agarose gel electrophoresis, avian influenza, amplification, diagnostic, DNA, infectious bursal disease, isolates, Newcastle, polymorphism, serotype, viral pathogens

The objectives for this project were the development, evaluation and implementation of molecular diagnostic tests for the rapid identification of infectious bursal disease virus (IBDV), Newcastle disease virus (NDV) and avian influenza virus (AIV).
