

Workshops for development of Salmonella control strategies in egg industry

Organisation:

University of Adelaide

Publication:

31 December 2015

Researchers:

K.K. Chousalkar, M. Sexton and A.R. McWhorter

Tags:

food safety, workshop, salmonella

The risk of Salmonella outbreaks related to egg production minimised through the development and uptake of a Salmonella specific extension and control program.

Nationwide workshops on Salmonella and eggs were conducted during 2015 in order to evaluate current knowledge, discuss issues and identify gaps related to quality egg production across the supply chain. Recommendations placed emphasis on future research needs, communication between industry and regulatory authorities and education of food handlers. Workshop outcomes will help the egg industry funding body (AECL) to focus on priority R&D areas in food safety.
